

Checklist of the Birds of the Pinal Mountains, Tonto National Forest, Arizona

The Pinal Peak Recreation Area of the Tonto National Forest, south of the city of Globe has a variety of habitats that includes: lower elevation mesquite bosques and riparian areas along Russell Road, Kellner Canyon Road, Ice House Canyon Road (r); Russell Gulch Landfill (l); mid-elevation chaparral and junipers along FR 651 and FR 112 (c); Ponderosa-oak woodlands at Sulfide del Rey Campground, Pioneer Pass, and Madera Peak Road (p); and upper elevation Douglas fir-aspens at Signal Peak, Pinal campgrounds, and the antenna tower area (d). Some bird species are permanent residents (R) with elevational movements between seasons; others are winter residents (W) only; summer (S) residents only; or passage migrants (M) present during short periods in the spring and fall. A few species are erratic wanderers (E) that can be present some years and absent others. Species that are seen on most visits during the season they are normally present are considered common (Cm); those seen on about half the visits are uncommon (Uc); those seen irregularly are considered rare (Ra), and those seen only once or twice in the last 25 years are considered occasional (Oc). Introduced species are italicized.
